**INTERNATIONAL PRELIMINARY
REPORT ON PATENTABILITY
(SEPARATE SHEET)**

International application No.

PCT/IB2004/001021

The following documents (D1-D2) are referred to in this communication; the numbering will be adhered to in the rest of the procedure:

D1: EP-A-1081184

D2: US-A- 5472495

1. Novelty (Art. 52(1) and 54 EPC)

D1 discloses the use of hindered piperidine pigments in polyolefin polymers for the reduction of warpage.

It is assumed that the warpage effect can be introduced by light or heat.

In D1 the piperidine derivative fulfills both functions claimed in the present application, namely that of the pigment as well as that of the piperidine derivative.

It is however not excluded in the present application that the organic pigment and the piperidine derivative should be different.

Hence D1 destroys the novelty of claims 1-10.

D2 discloses a process of producing a warpage free article made from a pigmented polyolefin by treating the pigments with a low temperature plasma.

No mention is made of the presence of hindered piperidine derivatives.

The application is therefore considered as being novel in view of D2.
